

The Lincoln Electric Co.
22801 St. Clair Avenue
Cleveland, Ohio 44117-1199

Product: UltraCore 71C
Lot No.: 11268261
Classification: E71T-1C-H8, E71T-9C-H8
Specification: FEMA 353
Test Completed: November 22, 2006

This is to certify that the above listed product was tested according to the procedures shown. Mechanical and chemical composition of the weld deposit were as shown.

The product stated herein was manufactured and supplied in accordance with the Quality System Program of The Lincoln Electric Co., Cleveland, Ohio, U.S.A. as outlined in our Quality Assurance Manual. The Quality System Program of The Lincoln Electric Co. has been accepted by ASME, ABS and approved by VdTUV, and is certified to ISO 9001:2000 by Certificate No. 30275 with an expiration date of November 13, 2008.

Test Conditions	Requirements	High Heat Input	Low Heat Input
	FEMA 353	Results	Results
Electrode Size (inch)		1/16	1/16
Electrode Polarity		DC+	DC+
Wire Feed Speed cm/min (inch/min.)		444 (175)	318 (125)
Current (amps)		220	175
Arc Voltage (volts)		24	22
Contact Tip to Work Distance mm (inch)		25 (1)	25 (1)
Passes / Layers		7/5	23/8
Preheat Temp. °C (°F)		150 (300)	20 (70)
Interpass Temp. °C (°F)		260 (500)	90 (200)
Shielding Gas (per AWS A5.32)		100% CO ₂ (SG-C)	100% CO ₂ (SG-C)
Heat Input kJ/mm (kJ/in) avg.		3.2 (82)	1.1 (28)
Weld Position		3G	1G
Mechanical Properties			
Tensile Strength MPa (ksi)	(70 min.)	530 (76)	620 (89)
Yield Strength, 0.2% offset MPa (ksi)	(58 min.)	450 (66)	570 (82)
Elongation (%)	22% min.	31	24
Avg. Charpy V-notch Impact Properties			
Joules @ 20 °C (ft-lbf @ 70°F)	(40 min.)	176 (130)	191 (141)
Chemical composition (weight %) AWS A5.20-2005			
C	0.12 max.	0.05	0.03
Mn	1.75 max.	1.20	1.33
Si	0.90 max.	0.40	0.46
S	0.03 max.	0.01	0.01
P	0.03 max.	0.01	0.01

This product satisfies the requirements of FEMA 353, Appendix D after exposure for eight weeks at 80°F, 80% relative humidity. Strength values in SI units are reported to the nearest 10 MPa converted from actual data. Preheat and interpass temperature values in SI units are reported to the nearest 5 degrees.

The strength and elongation properties were obtained from 12.5 mm (0.500 in), A4 tensile specimen artificially aged at 105 °C (220 °F) for 48 hours, as permitted by AWS A5.20-2005. A naturally aged tensile specimen may take months to achieve the specified properties. See AWS A5.20-2005, paragraph A8.3. The time required for the natural aging of weld deposits is dependent upon ambient conditions, weldment geometry, the metallurgical structure of the weld deposit and other factors.
