

LINCOLNWELD® 308/308H

Stainless ▪ AWS ER308H

KEY FEATURES

- Used to weld unstabilized austenitic stainless steels such as 302, 304H and 305
- Provides a high carbon deposit (minimum of .04% carbon) for high temperature applications
- Q2 Lot® - Certificates showing actual wire chemistry available online
- The high carbon deposit provides creep strength and higher tensile strength at elevated service temperatures

TEST RESULTS

Test results for mechanical properties, deposit or electrode composition and diffusible hydrogen levels were obtained from a weld produced and tested according to prescribed standards, and should not be assumed to be the expected results in a particular application or weldment. Actual results will vary depending on many factors, including, but not limited to, weld procedure, plate chemistry and temperature, weldment design and fabrication methods. Users are cautioned to confirm by qualification testing, or other appropriate means, the suitability of any welding consumable and procedure before use in the intended application.
