**SYSTEM SELECTION**

Ready-Pak® Packages are assembled and shipped on one pallet. One-Pak® Packages are not assembled. All packages are ordered using a single product number (K#). Welding wire and shielding gas must be ordered separately.

**WHAT IS VRD®?**

The VRD (Voltage Reduction Device) provides an additional measure of safety, especially when working in an environment with a higher risk of electrical shock such as wet areas and hot, humid, sweaty conditions. The VRD reduces the OCV (open circuit voltage) at the welding output terminals while not welding to less than 2 volts DC. Indicator lights will also signal when OCV during welding is above or below 30 volts DC.

Use of VRD does not degrade the machine rating or the ability to drive current through cables up to 200 ft. (61 m). No new welding techniques are required. The internal system does not require separate modules to operate.

The trademarks Miller Electric® and Dimension™ are the property of Illinois Tool Works Inc. Competitive dimension data was based on published literature available at the time of printing. Actual input power and input current draw product testing was completed by Lincoln Electric personnel in Cleveland, Ohio in March, 2010. Testing results were complete and accurate at the time of posting on www.lincolnelectric.com in April, 2010.

**QUALITY AND RELIABILITY**

**Tough PC Boards** - Encapsulated components and protective trays provide best-in-class environmental protection from dust and humidity.

**Fan-As-Needed™** - Reduces power consumption, dirt intake and damaging thermal cycling.

**Protected Electrical Connections** - Help ensure long-term reliability in unforgiving environments.

**Temperature and Dirt Resistant** - Double insulation and varnish on all primary components.

**Repeated Life and Reliability Testing** - Salt, rain, humidity, drop, jerk, vibration, impact and others.

**IP23 Rated** – While the fan is operating, the machine is subjected to a rain shower that directs water 60 degrees from vertical. While the machine is still wet, it must withstand a high voltage dielectric test and an insulation resistance test.

Among other tests, the Flextec 450 was subjected to extreme temperature environmental testing, including heat, cold, humidity, rain and dust.
