Safety Depends on You
Lincoln arc welding and cutting equipment is designed and built with safety in mind. However, your overall safety can be increased by proper installation ... and thoughtful operation on your part. DO NOT INSTALL, OPERATE OR REPAIR THIS EQUIPMENT WITHOUT READING THIS MANUAL AND THE SAFETY PRECAUTIONS CONTAINED THROUGHOUT. And, most importantly, think before you act and be careful.
FOR ENGINE powered equipment.

1.a. Turn the engine off before troubleshooting and maintenance work unless the maintenance work requires it to be running.

1.b. Operate engines in open, well-ventilated areas or vent the engine exhaust fumes outdoors.

1.c. Do not add the fuel near an open flame welding arc or when the engine is running. Stop the engine and allow it to cool before refueling to prevent spilled fuel from vaporizing on contact with hot engine parts and igniting. Do not spill fuel when filling tank. If fuel is spilled, wipe it up and do not start engine until fumes have been eliminated.

1.d. Keep all equipment safety guards, covers and devices in position and in good repair. Keep hands, hair, clothing and tools away from V-belts, gears, fans and all other moving parts when starting, operating or repairing equipment.

1.e. In some cases it may be necessary to remove safety guards to perform required maintenance. Remove guards only when necessary and replace them when the maintenance requiring their removal is complete. Always use the greatest care when working near moving parts.

1.f. Do not put your hands near the engine fan. Do not attempt to override the governor or idler by pushing on the throttle control rods while the engine is running.

1.g. To prevent accidentally starting gasoline engines while turning the engine or welding generator during maintenance work, disconnect the spark plug wires, distributor cap or magneto wire as appropriate.

FOR ENGINE powered equipment.

ARC WELDING CAN BE HAZARDOUS. PROTECT YOURSELF AND OTHERS FROM POSSIBLE SERIOUS INJURY OR DEATH. KEEP CHILDREN AWAY. PACEMAKER WEARERS SHOULD CONSULT WITH THEIR DOCTOR BEFORE OPERATING.

Read and understand the following safety highlights. For additional safety information, it is strongly recommended that you purchase a copy of “Safety in Welding & Cutting - ANSI Standard Z49.1” from the American Welding Society, P.O. Box 351040, Miami, Florida 33135 or CSA Standard W117.2-1974. A Free copy of “Arc Welding Safety” booklet E205 is available from the Lincoln Electric Company, 22801 St. Clair Avenue, Cleveland, Ohio 44117-1199.

BE SURE THAT ALL INSTALLATION, OPERATION, MAINTENANCE AND REPAIR PROCEDURES ARE PERFORMED ONLY BY QUALIFIED INDIVIDUALS.

ELECTRIC AND MAGNETIC FIELDS may be dangerous

2.a. Electric current flowing through any conductor causes localized Electric and Magnetic Fields (EMF). Welding current creates EMF fields around welding cables and welding machines.

2.b. EMF fields may interfere with some pacemakers, and welders having a pacemaker should consult their physician before welding.

2.c. Exposure to EMF fields in welding may have other health effects which are now not known.

2.d. All welders should use the following procedures in order to minimize exposure to EMF fields from the welding circuit:

2.d.1. Route the electrode and work cables together - Secure them with tape when possible.

2.d.2. Never coil the electrode lead around your body.

2.d.3. Do not place your body between the electrode and work cables. If the electrode cable is on your right side, the work cable should also be on your right side.

2.d.4. Connect the work cable to the workpiece as close as possible to the area being welded.

2.d.5. Do not work next to welding power source.
**SAFETY**

**ELECTRIC SHOCK can kill.**

3.a. The electrode and work (or ground) circuits are electrically “hot” when the welder is on. Do not touch these “hot” parts with your bare skin or wet clothing. Wear dry, hole-free gloves to insulate hands.

3.b. Insulate yourself from work and ground using dry insulation. Make certain the insulation is large enough to cover your full area of physical contact with work and ground.

In addition to the normal safety precautions, if welding must be performed under electrically hazardous conditions (in damp locations or while wearing wet clothing; on metal structures such as floors, gratings or scaffolds; when in cramped positions such as sitting, kneeling or lying, if there is a high risk of unavoidable or accidental contact with the workpiece or ground) use the following equipment:

- Semiautomatic DC Constant Voltage (Wire) Welder.
- DC Manual (Stick) Welder.
- AC Welder with Reduced Voltage Control.

3.c. In semiautomatic or automatic wire welding, the electrode, electrode reel, welding head, nozzle or semiautomatic welding gun are also electrically “hot”.

3.d. Always be sure the work cable makes a good electrical connection with the metal being welded. The connection should be as close as possible to the area being welded.

3.e. Ground the work or metal to be welded to a good electrical (earth) ground.

3.f. Maintain the electrode holder, work clamp, welding cable and welding machine in good, safe operating condition. Replace damaged insulation.

3.g. Never dip the electrode in water for cooling.

3.h. Never simultaneously touch electrically “hot” parts of electrode holders connected to two welders because voltage between the two can be the total of the open circuit voltage of both welders.

3.i. When working above floor level, use a safety belt to protect yourself from a fall should you get a shock.

3.j. Also see Items 6.c. and 8.

**ARC RAYS can burn.**

4.a. Use a shield with the proper filter and cover plates to protect your eyes from sparks and the rays of the arc when welding or observing open arc welding. Headshield and filter lens should conform to ANSI Z87.1 standards.

4.b. Use suitable clothing made from durable flame-resistant material to protect your skin and that of your helpers from the arc rays.

4.c. Protect other nearby personnel with suitable, non-flammable screening and/or warn them not to watch the arc nor expose themselves to the arc rays or to hot spatter or metal.

**FUMES AND GASES can be dangerous.**

5.a. Welding may produce fumes and gases hazardous to health. Avoid breathing these fumes and gases. When welding, keep your head out of the fume. Use enough ventilation and/or exhaust at the arc to keep fumes and gases away from the breathing zone. When welding with electrodes which require special ventilation such as stainless or hard facing (see instructions on container or MSDS) or on lead or cadmium plated steel and other metals or coatings which produce highly toxic fumes, keep exposure as low as possible and below Threshold Limit Values (TLV) using local exhaust or mechanical ventilation. In confined spaces or in some circumstances, outdoors, a respirator may be required. Additional precautions are also required when welding on galvanized steel.

5.b. Do not weld in locations near chlorinated hydrocarbon vapors coming from degreasing, cleaning or spraying operations. The heat and rays of the arc can react with solvent vapors to form phosgene, a highly toxic gas, and other irritating products.

5.c. Shielding gases used for arc welding can displace air and cause injury or death. Always use enough ventilation, especially in confined areas, to insure breathing air is safe.

5.d. Read and understand the manufacturer’s instructions for this equipment and the consumables to be used, including the material safety data sheet (MSDS) and follow your employer’s safety practices. MSDS forms are available from your welding distributor or from the manufacturer.

5.e. Also see Item 1.b.

Mar ‘95
WELDING SPARKS can cause fire or explosion.

6.a. Remove fire hazards from the welding area. If this is not possible, cover them to prevent the welding sparks from starting a fire. Remember that welding sparks and hot materials from welding can easily go through small cracks and openings to adjacent areas. Avoid welding near hydraulic lines. Have a fire extinguisher readily available.

6.b. Where compressed gases are to be used at the job site, special precautions should be used to prevent hazardous situations. Refer to “Safety in Welding and Cutting” (ANSI Standard Z49.1) and the operating information for the equipment being used.

6.c. When not welding, make certain no part of the electrode circuit is touching the work or ground. Accidental contact can cause overheating and create a fire hazard.

6.d. Do not heat, cut or weld tanks, drums or containers until the proper steps have been taken to insure that such procedures will not cause flammable or toxic vapors from substances inside. They can cause an explosion even though they have been “cleaned”. For information, purchase “Recommended Safe Practices for the Preparation for Welding and Cutting of Containers and Piping That Have Held Hazardous Substances”, AWS F4.1 from the American Welding Society (see address above).

6.e. Vent hollow castings or containers before heating, cutting or welding. They may explode.

6.f. Sparks and spatter are thrown from the welding arc. Wear oil free protective garments such as leather gloves, heavy shirt, cuffless trousers, high shoes and a cap over your hair. Wear ear plugs when welding out of position or in confined places. Always wear safety glasses with side shields when in a welding area.

6.g. Connect the work cable to the work as close to the welding area as practical. Work cables connected to the building framework or other locations away from the welding area increase the possibility of the welding current passing through lifting chains, crane cables or other alternate circuits. This can create fire hazards or overheat lifting chains or cables until they fail.

6.h. Also see item 1.c.

6.b. Always keep cylinders in an upright position securely chained to an undercarriage or fixed support.

6.c. Cylinders should be located:
   • Away from areas where they may be struck or subjected to physical damage.
   • A safe distance from arc welding or cutting operations and any other source of heat, sparks, or flame.

6.d. Never allow the electrode, electrode holder or any other electrically “hot” parts to touch a cylinder.

6.e. Keep your head and face away from the cylinder valve outlet when opening the cylinder valve.

6.f. Valve protection caps should always be in place and hand tight except when the cylinder is in use or connected for use.

6.g. Read and follow the instructions on compressed gas cylinders, associated equipment, and CGA publication P-l, “Precautions for Safe Handling of Compressed Gases in Cylinders,” available from the Compressed Gas Association 1235 Jefferson Davis Highway, Arlington, VA 22202.

FOR ELECTRICALLY powered equipment.

8.a. Turn off input power using the disconnect switch at the fuse box before working on the equipment.

8.b. Install equipment in accordance with the U.S. National Electrical Code, all local codes and the manufacturer’s recommendations.

8.c. Ground the equipment in accordance with the U.S. National Electrical Code and the manufacturer’s recommendations.

CYLINDER may explode if damaged.

7.a. Use only compressed gas cylinders containing the correct shielding gas for the process used and properly operating regulators designed for the gas and pressure used. All hoses, fittings, etc., should be suitable for the application and maintained in good condition.

7.b. Always keep cylinders in an upright position securely chained to an undercarriage or fixed support.

7.c. Cylinders should be located:
   • Away from areas where they may be struck or subjected to physical damage.
   • A safe distance from arc welding or cutting operations and any other source of heat, sparks, or flame.

7.d. Never allow the electrode, electrode holder or any other electrically “hot” parts to touch a cylinder.

7.e. Keep your head and face away from the cylinder valve outlet when opening the cylinder valve.

7.f. Valve protection caps should always be in place and hand tight except when the cylinder is in use or connected for use.

7.g. Read and follow the instructions on compressed gas cylinders, associated equipment, and CGA publication P-l, “Precautions for Safe Handling of Compressed Gases in Cylinders,” available from the Compressed Gas Association 1235 Jefferson Davis Highway, Arlington, VA 22202.

Mar ‘95
PRÉCAUTIONS DE SÛRETÉ

Pour votre propre protection lire et observer toutes les instructions et les précautions de sûreté spécifiques qui paraissent dans ce manuel aussi bien que les précautions de sûreté générales suivantes:

1. **Sûreté Pour Soudage A L’Arc**
   a. Les circuits à l’électrode et à la pièce sont sous tension quand la machine à souder est en marche. Éviter toujours tout contact entre les parties sous tension et la peau nue ou les vêtements mouillés. Porter des gants secs et sans trous pour isoler les mains.
   b. Faire très attention de bien s’isoler de la masse quand on soude dans des endroits humides, ou sur un plancher métallique ou des grilles métalliques, principalement dans les positions assis ou couché pour lesquelles une grande partie du corps peut être en contact avec la masse.
   c. Maintenir le porte-électrode, la pince de masse, le câble de soudage et la machine à souder en bon et sûr état de fonctionnement.
   d. Ne jamais plonger le porte-électrode dans l’eau pour le refroidir.
   e. Ne jamais toucher simultanément les parties sous tension des porte-électrodes connectés à deux machines à soudé parce que la tension entre les deux pinces peut être le total de la tension à vide des deux machines.
   f. Si on utilise la machine à souder comme une source de courant pour soudage semi-automatique, ces précautions pour le porte-électrode s’appliquent aussi au pistolet de soudage.

2. Dans le cas de travail au dessus du niveau du sol, se protéger contre les chutes dans le cas ou on recoit un choc. Ne jamais enrouler le câble-électrode autour de n’importe quelle partie du corps.

3. Un coup d’arc peut être plus sévère qu’un coup de soliel, donc:
   a. Utiliser un bon masque avec un verre filtrant approprié ainsi qu’un verre blanc afin de se protéger les yeux du rayonnement de l’arc et des projections quand on soude ou quand on regarde l’arc.
   b. Porter des vêtements convenables afin de protéger la peau de soudeur et des aides contre le rayonnement de l’arc.
   c. Protéger l’autre personnel travaillant à proximité au soudage à l’aide d’écrans appropriés et non-inflammables.

5. Toujours porter des lunettes de sécurité dans la zone de soudage. Utiliser des lunettes avec écrans latéraux dans les zones où l’on pique le laitier.

6. Eloigner les matériaux inflammables ou les recouvrir afin de prévenir tout risque d’incendie dû aux étincelles.

7. Quand on ne soude pas, poser la pince à une endroit isolé de la masse. Un court-circuit accidentel peut provoquer un échauffement et un risque d’incendie.

8. S’assurer que la masse est connectée le plus près possible de la zone de travail qu’il est pratique de le faire. Si on place la masse sur la charpente de la construction ou d’autres endroits éloignés de la zone de travail, on augmente le risque de voir passer le courant de soudage par les chaines de levage, câbles de grue, ou autres circuits. Cela peut provoquer des risques d’incendie ou d’échauffement des chaines et des câbles jusqu’à ce qu’ils se rompent.

9. Assurer une ventilation suffisante dans la zone de soudage. Ceci est particulièrement important pour le soudage de tôles galvanisées plombées, ou cadmiées ou tout autre métal qui produit des fumeés toxiques.

10. Ne pas souder en présence de vapeurs de chlore provenant d’opérations de dégraissage, nettoyage ou pistolage. La chaleur ou les rayons de l’arc peuvent réagir avec les vapeurs du solvant pour produire du phosgène (gas fortement toxique) ou autres produits irritants.

**PRÉCAUTIONS DE SÛRETÉ POUR LES MACHINES À SOUDER À TRANSFORMATEUR ET À REDRESSEUR**

1. Relier à la terre le chassis du poste conformément au code de l’électricité et aux recommandations du fabricant. Le dispositif de montage ou la pièce à souder doit être branché à une bonne mise à la terre.

2. Autant que possible, l’installation et l’entretien du poste seront effectués par un électricien qualifié.

3. Avant de faire des travaux à l’interieur de poste, la débrancher à l’interrupteur à la boîte de fusibles.

4. Garder tous les couvercles et dispositifs de sûreté à leur place.
Thank You for selecting a QUALITY product by Lincoln Electric. We want you to take pride in operating this Lincoln Electric Company product as much pride as we have in bringing this product to you!

Please Examine Carton and Equipment For Damage Immediately

When this equipment is shipped, title passes to the purchaser upon receipt by the carrier. Consequently, Claims for material damaged in shipment must be made by the purchaser against the transportation company at the time the shipment is received.

Please record your equipment identification information below for future reference. This information can be found on your machine nameplate.

Product ______________________________________
Model Number __________________________________
Code Number or Date Code _________________________
Serial Number __________________________________
Date Purchased _________________________________
Where Purchased ________________________________

Whenever you request replacement parts or information on this equipment, always supply the information you have recorded above. The code number is especially important when identifying the correct replacement parts.

On-Line Product Registration

- Register your machine with Lincoln Electric either via fax or over the Internet.
  - For faxing: Complete the form on the back of the warranty statement included in the literature packet accompanying this machine and fax the form per the instructions printed on it.
  - For On-Line Registration: Go to our WEB SITE at www.lincolnelectric.com. Choose “Quick Links” and then “Product Registration”. Please complete the form and submit your registration.

Read this Operators Manual completely before attempting to use this equipment. Save this manual and keep it handy for quick reference. Pay particular attention to the safety instructions we have provided for your protection. The level of seriousness to be applied to each is explained below:

⚠️ WARNING

This statement appears where the information must be followed exactly to avoid serious personal injury or loss of life.

⚠️ CAUTION

This statement appears where the information must be followed to avoid minor personal injury or damage to this equipment.

HANDY MIG

LINCOLN ELECTRIC
SAFETY PRECAUTIONS

WARNING

ELECTRIC SHOCK can kill.

- Only qualified personnel should perform this installation.
- Only personnel that have read and understood the Machine Operating Manual should install and operate this equipment.
- Machine must be plugged into a receptacle which is grounded per any national, local or other applicable electrical codes.
- The Machine power switch is to be in the OFF ("O") position when installing work cable and gun and when connecting power cord to input power.

IDENTIFY AND LOCATE COMPONENTS

If you have not already done so, unpack the machine from its carton and remove all packing material around the machine. The following items are shipped loose. (see Figure A.1):

1. HANDY MIG with work clamp, Gun and cable assembly attached.
2. This operating manual
3. Two contact tips for .035(0.9mm) diameter wire.
4. Three contact tips for .025(0.6mm) diameter wire.
5. Gas Nozzle.
6. Chipping hammer and brush.
7. Starter spool of .035" (0.9mm) NR211-MP flux cored wire.
8. Starter spool of .025" (0.6mm) solid mig wire.
10. Handshield with filter plate and lens.

For available options and accessories refer to the Accessories Section of this manual.
SELECT SUITABLE LOCATION

Place the machine on a secure, level surface or recommended undercarriage. The machine may topple over if this procedure is not followed. To minimize over heating, locate the welder in a dry location where there is free circulation of clean air. Do not place on combustible surfaces.

STACKING

Machines cannot be stacked.

CHANGING POLARITY

1. For **Negative Polarity Welding (DC-)**: Refer to Figure A.2. As delivered, the machine is wired for Negative polarity with the gun cable connected to the Negative (-) output terminal and the work cable to the Positive (+) output terminal. Make sure that both thumbscrews are tight. This is the typical configuration for **Flux Cored Welding (FCAW)**.

2. For **Positive Polarity Welding (DC+)**: Refer to Figure A.3. To wire for Positive polarity, connect the gun cable to the Positive (+) output terminal and the work cable to the Negative (-) terminal. This is the typical configuration for the **Metal Inert Gas (MIG)** process. Make sure that both thumbscrews are tight.

GAS CONNECTION

When using the MIG process, a cylinder of shielding gas (appropriate for the metal being welded) must be obtained.

**WARNING**

- CYLINDER may explode if damaged. Keep cylinder upright and chained to support.
- Keep cylinder away from areas where it may be damaged.
- Never lift welder with cylinder attached.
- Never allow welding electrode to touch cylinder.
- Keep cylinder away from welding or other live electrical circuits.

- BUILDUP OF SHIELDING GAS may harm health or kill.
- Shut off shielding gas supply when not in use.
- SEE AMERICAN NATIONAL STANDARD Z-49.1, “SAFETY IN WELDING AND CUTTING” PUBLISHED BY THE AMERICAN WELDING SOCIETY.
SHIELDING GAS CONNECTION
(FIGURE A.5)

1. Chain the cylinder to a wall or other stationary support to prevent the cylinder from falling over. Insulate the cylinder from the work circuit work ground.

2. With the cylinder securely installed, remove the cylinder cap. Stand to one side away from the outlet and open the cylinder valve very slightly for an instant. This blows away any dust or dirt which may have accumulated in the valve outlet.

3. Attach one end of the inlet gas hose to the outlet fitting of the gas cylinder secure with hose clamp. Connect the other end to the Gas Inlet Fitting on the machine and secure with hose clamp. Make certain the gas inlet hose is not kinked or twisted.

4. The machine is supplied with a regulator suitable for a mixed shielding gas CO₂ Argon. For welding with 100% CO₂ a suitable regulator or adapter must be purchased separately from a welding gas supplier. To prevent leakage, if welding with 100% CO₂ shielding gas the regulator for carbon dioxide must have a plastic adapter washer seated in the fitting that attaches to the cylinder. This adapter is available from your local gas supplier.

REQUIREMENTS FOR MAXIMUM OUTPUT

A line cord with a 15 amp, 125 volt, three-prong plug (NEMA Type 5-15P) is factory installed on the machine. Connect this plug to a mating grounded receptacle which is connected to a 20 amp branch circuit with a nominal voltage rating of 115 volts to 125 volts, 60 hertz, AC only. If connected to a circuit protected by fuses, use a time delay fuse marked “D”. With this installation, the machine can be used at an output of 70 amps, 17 volts, 20% duty cycle (2 minutes of every 10 minutes used for welding).

EXTENSION CORD USAGE

If an extension cord is required, use one that is rated for the application and is 3 conductor #14 AWG (2.1 mm²) or larger. The recommended maximum lengths are 25 ft (7.5 m) if #14 AWG (2.1 mm²) is used and 50 ft (15 m) if #12 AWG (3.3 mm²) is used.
Read entire operation section before operating the machine.

**WARNING**

**ELECTRIC SHOCK can kill.**
- Do not touch electrically live parts or electrode with skin or wet clothing. Insulate yourself from work and ground.
- Always wear dry insulating gloves.

**FUMES AND GASES can be dangerous.**
- Keep your head out of fumes.
- Use ventilation or exhaust to remove fumes from breathing zone.

**WELDING SPARKS can cause fire or explosion.**
- Keep flammable material away.
- Do not weld on closed containers.

**ARC RAYS can burn eyes and skin.**
- Wear eye, ear and body protection.

Observe all safety information throughout this manual.

**GENERAL DESCRIPTION**

The machine is a semiautomatic constant voltage DC arc welder. The machine uses a single phase constant voltage transformer, solid state rectifier and a DC permanent magnet motor for feeding and welding solid steel electrode and flux-cored electrode. The machine is ideally suited for individuals having access to 115 volt AC input power and wanting the ease of use, quality and dependability of both metal inert gas (MIG) welding and the Innershield electrode process (self-shielded flux-cored welding). The machine will handle reels of wire up to 2 lbs (1 kg).

**RECOMMENDED PROCESSES**

The machine can be used for welding carbon and low-alloy steel with CO₂ or argon/CO₂ mixture shielding gas. The welder can also be used without gas for the self-shielded, Innershield electrode process. The machine is configured for the Flux Cored Arc Welding process as delivered from the factory.

**OPERATIONAL FEATURES AND CONTROLS**

The machine has the following controls as standard:
- Power ON/OFF Switch
- Heat Range Switch
- 1 – 2 Fine Heat Adjustment Switch
- Wire Speed Control

**DESIGN FEATURES AND ADVANTAGES**

- Operates on 115 volt input - no special wiring required.
- Solid state output control.
- Overload protection - incorporates a thermostat to protect the welder from overheating caused by malfunctions or overly heavy use.
- Permanent magnet wire drive motor.
- Easy-to-set controls for arc voltage and wire speed.
- Thumbscrew release idle roll pressure arm is easily adjusted.
- Reversible, dual groove drive roll will feed .023-.035" (0.6 - 0.9 mm) diameter wire.
- Accommodates spools of wire up to 2 lbs (1 kg) in weight.
- No external shielding gas is required when used with Lincoln Innershield .035" (0.9 mm) NR®-211-MP electrode.
- Easy to change polarity.
**WELDING CAPABILITY**

The machine is rated at 70 amps, 17 volts, at 20% duty cycle on a ten minute basis. It is capable of higher output currents at lower duty cycles.

**LIMITATIONS**

The machine is recommended for welding on mild steel up to 1/8" thick.

**TABLE B.1 – MIG WELDING MATERIAL/GAS COMBINATIONS**

<table>
<thead>
<tr>
<th>Material</th>
<th>Gas</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>Low Alloy Steel</td>
<td>CO2 or Argon/CO2</td>
</tr>
</tbody>
</table>

**FLUX-CORED (INNERSHIELD) WELDING**

The recommended electrode for the flux-cored, self-shielded process is 0.035" (0.9 mm) diameter Lincoln Innershield NR-211-MP on 2 lbs. (.9 kg) spools.

**SEQUENCE OF OPERATIONS**

**WIRE LOADING AND THREADING**

Refer to Figure B.2.

Turn machine power switch to the OFF ("0") position before working inside the wire feed enclosure. Make sure that the wire feed drive roll and the contact tip of the gun match the diameter and type of wire used.

1. Push the spool onto the spindle so that the wire feeds off the bottom of the spool, toward the drive roll.
2. Push the spool spacer onto the spindle, against the spool.
3. Slide the spring onto the spool, then press on the spool lock, turning it clockwise to lock the spool assembly onto the spindle.

**WELDING OPERATIONS**

**PROCESS GUIDELINES**

**MIG WELDING**

Table B.1 shows the recommended material/gas combinations for MIG welding with solid electrodes.
Refer to Figure B.3.

4. Release the spring loaded thumbscrew and lift up the idle roll arm away from the wire feed drive roll. Ensure that the visible, stenciled size on the drive roll side facing you matches the wire size being used.

5. Carefully detach the end of the wire from the spool maintain tension on the wire. To prevent the spool from unwinding and do not release the wire until after step 8.

6. Cut the bent portion of wire off and straighten the first 4" (100 mm).

7. Thread the wire through the ingoing guide tube, over the drive roll, and into the gun liner.

8. Close the idle roll arm and turn down the thumb-screw until the idle roller presses down firmly on the wire. (Now you may release the welding wire). Make sure the wire is positioned in the groove of the lower drive roll.

9. The spring loaded thumbscrew on the idle roll arm adjusts the pressure on the wire. Adjust pressure by turning the thumb screw to prevent spool overrun, but still allow smooth and easy wire feeding. Start with the pressure set to an intermediate value. Readjust, if necessary. Slightly less pressure may be required when using 0.023 - 0.025" (0.6 mm) wire. If the drive roll slips while feeding wire, the pressure should be increased until the wire feeds properly.

10. Remove the gas nozzle and contact tip from the gun.

11. Turn the machine ON ("I").

12. Straighten the gun cable assembly.

13. Depress the gun trigger switch and feed welding wire through the gun and cable. (Point the gun away from yourself and others while feeding wire.) Release the gun trigger after wire appears at the end of the gun.

14. Turn off the machine.

15. Replace the contact tip. Refer to Figure B-4. Cut the wire off so that 3/8" to 5/8" (10 - 15 mm) protrudes from the end of the tip.

16. Turn on the machine. The machine is now ready to weld.

**SHIELDING GAS**

When using the MIG process, you will need a cylinder of carbon dioxide (CO₂) or argon-carbon dioxide mixed shielding gas.

The preset regulator supplied with the machine is designed for use with argon blend gas. An adapter and plastic washer are needed for using 100% CO₂ gas. This adapter is available from your local gas supplier.

1. Open the cylinder valve slowly a fraction of a turn. When the cylinder pressure gauge pointer stops moving, open the valve fully.

2. Keep the cylinder valve closed, except when welding. When finished welding:
   - Close the cylinder valve to stop gas flow.
   - Depress the gun trigger briefly to release the pressure in the gas hose.
   - Turn off the machine.

---

**WARNING**

- When feeding the welding wire through the gun, the drive roll, the gun connector block and the gun contact tip are always energized relative to work and ground.
READ the LEARNING TO WELD (LTW1) manual prior to making your first weld. Also, refer to Table B.1 and the Procedure Decal located on the inside of the wire drive compartment door of your machine for process selection, consumables, and quick tips for welding.

1. Select the right welding process based on the type and condition of the pieces to be welded; the environment in which welding is to be done; and the desired finished appearance of the weld.
2. Select and install the welding wire to match the process. Use Genuine Lincoln Electric Brand wire. Wire quality is essential for successful welding.
3. Install the drive roll, contact tip, and nozzle appropriate for the weld process.
4. Check that the polarity is correct for the welding wire being used and that the gas supply, if required, is turned on.
5. Refer to Figure B.5. Connect the work clamp to the metal to be welded. The work clamp must make good electrical contact to the work piece. The work piece must also be grounded as stated in Arc Welding Safety Precautions in the beginning of this manual.
6. Based on the welding process type and material thickness of the work piece, use the chart below (or on the procedure decal located on the wire drive door) to set the correct wire feed speed and heat range setting.
7. Based on the weld joint type and orientation of the weld joint, position the gun into the joint at the correct angle. Refer to the LEARNING TO WELD (LTW1) manual.
8. To begin welding, raise your hand shield to protect your eyes and pull the trigger.
9. While welding, travel at a constant speed and maintain an electrode stickout of 3/8". Follow the correct direction of travel for the process and joint type and orientation as detailed in the LEARNING TO WELD (LTW1) manual.
10. To stop welding, release the gun trigger.
11. When no more welding is to be done, close the valve on the gas cylinder (if used), momentarily operate the gun trigger to release gas pressure, and turn off the machine.

<td></td>
<td></td>
</tr>
</tbody>
</table>

The table above provides guidance for selecting the right welding process, wire, and polarities based on the specific requirements of the welding task. The use of genuine Lincoln Electric brand wire is emphasized due to its critical role in ensuring successful welding. Each step is crucial to prevent defects and ensure a clean, professional finish on the weld.
CLEANING TIP AND GAS NOZZLE

Clean the contact tip and gas nozzle to avoid arc bridging between them. Bridging can result in a shorted nozzle, poor welds and an overheated gun. Hint: Anti-stick spray or gel, available from a welding supply distributor, may reduce buildup and aid in spatter removal.

CHANGING MACHINE OVER TO FEED OTHER WIRE SIZES

The machine is shipped from the factory ready to feed 0.035” (0.9 mm) diameter wire. To operate the machine with other sizes of wire, it is necessary to change the contact tip and change the drive roll to other sizes. Refer to Changing the Contact Tip and Changing the Drive Roll in the MAINTENANCE section for specific information on these procedures.

OVERLOAD PROTECTION

THERMAL PROTECTION

The machine has a maximum output duty cycle of 20%. If the duty cycle is exceeded, a thermal protector will shut off the output until the machine cools to a normal operating temperature. This is an automatic function of the machine and does not require user intervention.
ACCESSORIES

INNERSHIELD WELDING WIRE

NR-211-MP Innershield welding wire - .035” (0.9 mm) diameter flux-cored electrode.

MIG WELDING WIRE

Lincoln L56- .025” (0.6mm) diameter solid steel electrode

CONSUMABLE PARTS

The following items are commonly consumed over the life of the welder and may need to be ordered. See the complete parts list at the end of this manual for machine replacement parts.

MAINTENANCE

SAFETY PRECAUTIONS

⚠️ WARNING

ELECTRIC SHOCK can kill.

- Disconnect input power by removing plug from receptacle before working inside machine. Use only grounded receptacle. Do not touch electrically "hot" parts inside machine.

- Have qualified personnel do the maintenance and trouble shooting work.

ITEMS REQUIRING NO MAINTENANCE

- Drive Motor and Gearbox – Lifetime lubrication
- Wire Reel Spindle – Do NOT lubricate shaft

ROUTINE AND PERIODIC MAINTENANCE

BEFORE EACH USE

- Check over machine and accessories for any obvious condition that may prevent safe performance or operation. Repair or replace items as necessary to correct any abnormal condition.

AFTER 5 MINUTES OF WELDING

or when spatter accumulates in the gas nozzle:

- Clean the contact tip and gas nozzle to avoid bridging between the nozzle and contact tip. Bridging results in a shorted nozzle, poor welds and overheated gun. Hint: Anti-stick spray or gel available from a welding supply distributor may reduce buildup and aid in spatter removal.
CLEANING THE GUN LINER

- Unplug the machine or turn the power switch to the OFF - “0” position.
- Remove the gas nozzle and contact tip from the gun.
- Clean the inside diameter with a short piece of wire.
- Clean the cable liner when rough and erratic wire feeding occur:

  Lay the cable out straight. Blow out gently with dry compressed air (max 145 psi) through the wire guide tube and check the condition of the tube. Bend the cable back and forth, then blow the tube out again. Repeat until clean.

  **CAUTION**

  Excessive pressure at start may cause the dirt to form a plug.

CLEANING COMPONENTS AS REQUIRED

- Unplug the machine or turn the power switch to the OFF - “0” position.
- Blow dirt out of the welder with low pressure air to eliminate excessive dirt and dust buildup that could cause the welder to run hot.
- Vacuum accumulated dirt from the gear-box and wire feed section.
- Inspect the incoming guide tube and clean the inside diameter if necessary. Replace when excessively worn.
- Replace Contact Tip - when the hole is enlarged or elongated. (Refer to Changing The Contact Tip, in this section.)
- Check the condition of the wire feed rollers. Remove any metallic dust deposited in the feed area (rollers and entrance and outlet wire guide).
- Check the gas hose and fittings for tightness.

COMPONENT REPLACEMENT PROCEDURES

FIGURE D.1 – CONTACT TIP REPLACEMENT

CHANGING THE CONTACT TIP

1. Refer to Figure D.1. Remove the gas nozzle from the gun by unscrewing it counter-clockwise.
2. Remove the existing contact tip from the gun by unscrewing it counter-clockwise.
3. Insert and tighten the desired contact tip. Do not overtighten.
4. Replace the gas nozzle.

CHANGING THE DRIVE ROLL

FIGURE D.2 – DRIVE ROLL REPLACEMENT

The machine Wire Feed Drive Roll has two grooves; one for 0.023” - 0.025” (0.6 mm) solid steel electrode and the other for 0.030” (0.8 mm) solid and 0.035” (0.9 mm) flux-cored steel electrode. See Figure D.2. Use the appropriate sized groove for the wire used (as indicated by the stenciling on the side of the drive roll). Reverse the drive roll as follows.
Refer to Figure D.2.
1. Make certain the machine power switch is OFF - “0”.
2. Open the spring loaded pressure arm. Lift up the idle roll arm.
3. Remove the Thumbscrew holding the drive roll.
4. Replace the drive roll so that the desired size, stenciled on the side of the drive roll, is toward the inside and visible.
5. Replace the Thumbscrew and tighten.

**GUN ASSEMBLY REMOVAL**

1. Unplug machine and disconnect gas supply.
2. Remove wire drive door and left case side.
3. Remove trigger leads. The trigger leads are routed through the center panel and connected to the P.C. board (3/1,3/2). Use care in removal as not to damage the P.C. board or adjoining leads.
4. Remove gas line connections.
5. Remove gun connections from output studs.
6. Disconnect the gun liner from the wire drive. Remove nut and spacer and slide liner back and out.
7. Installation is the reverse of removal. (7 thru 1)

**WORK CABLE INSTALLATION**

The work cable and clamp comes already installed. If you should ever need to replace or reinstall the cable, do the following. Refer to Figure D.3.

![FIGURE D.3](image)

1. Remove the case sides.
2. Pass the end of the work cable with the terminal lug through the Work Cable Access Hole in the case front.
3. Route the cable as detailed in the picture. The work cable should be routed between the metal divider panel and the wire feed gear box and gun assembly.
HOW TO USE TROUBLESHOOTING GUIDE

⚠️ WARNING

Service and Repair should only be performed by Lincoln Electric Factory Trained Personnel. Unauthorized repairs performed on this equipment may result in danger to the technician and machine operator and will invalidate your factory warranty. For your safety and to avoid Electrical Shock, please observe all safety notes and precautions detailed throughout this manual.

This Troubleshooting Guide is provided to help you locate and repair possible machine malfunctions. Simply follow the three-step procedure listed below.

**Step 1. LOCATE PROBLEM (SYMPTOM).**
Look under the column labeled “PROBLEM (SYMPTOM)”. This column describes possible symptoms that the machine may exhibit. Find the listing that best describes the symptom that the machine is exhibiting.

**Step 2. POSSIBLE CAUSE.**
The second column labeled “POSSIBLE CAUSE” lists the obvious external possibilities that may contribute to the machine symptom.

**Step 3. RECOMMENDED COURSE OF ACTION**
This column provides a course of action for the Possible Cause, generally it states to contact your local Lincoln Authorized Field Service Facility.

If you do not understand or are unable to perform the Recommended Course of Action safely, contact your local Lincoln Authorized Field Service Facility.

⚠️ CAUTION

If for any reason you do not understand the test procedures or are unable to perform the tests/repairs safely, contact your Local Lincoln Authorized Field Service Facility for technical troubleshooting assistance before you proceed.
If for any reason you do not understand the test procedures or are unable to perform the tests/repairs safely, contact your Local Lincoln Authorized Field Service Facility for technical troubleshooting assistance before you proceed.
If for any reason you do not understand the test procedures or are unable to perform the tests/repairs safely, contact your **Local Lincoln Authorized Field Service Facility** for technical troubleshooting assistance before you proceed.
